- HISTORICAL LINKS CELEBRATED WITH LARGE ORDER

WELCOME

2017 has started well and a high level of confidence prevails. The construction industry is growing, fuelled by a strong house building sector. With housing stocks at an alltime low and plans to build one million new homes in the UK over the next few years, this is set to continue.

The economy is on a solid footing as the Brexit negotiations begin in earnest and we are in exciting times as the UK forges a new relationship with Europe. It is also very exciting times for all at Gunn JCB as we embrace an ever increasing range of brilliant new products from JCB.

The all new JCB access platforms give us a massive opportunity with some existing customers but also opens up a whole new marketplace. This 27 model line-up, combined with Gunn JCB parts and service support, is a real industry game changer.

With new JCB DieselMax engines, a new 18m HiViz Loadall, new Tier IV Final Hydradig and new wheeled loaders, there are lots of opportunities for growth.

Thank you for helping us to get off to a good start. We look forward to helping you to make the rest of 2017 a great time for your businesses.

Paul Hartshorn Managing Director

NEW SPECS ANYONE?

No, not machine specs. We mean glasses for kids and we were pleased to help the launch of the new JCB kids glasses at Specsavers at their Manchester Fort store in April. Our 3CX Backhoe Loader modelled its very own pair of JCB glasses to help promote the new range which includes Joey JCB and JCB with tyre tracks aimed at 4 - 8 year olds. Lots of children had their faces painted and then had selfies with the 3CX with the hashtag #digthelook. A JCB Kids' competition for the best selfie was won by Renia Marek who won a set of JCB overalls, a cap, a ride-on toy and 4 tickets to Gulliver's Kingdom in Matlock Bath.

JOINT CHARITY EFFORT FOR NSPCC

Gunn JCB aims to support the fund-raising efforts of the NSPCC at every opportunity, so it was with great pleasure that we joined forces with JCB to host a lunch for the Briggs Conference at JCB HQ in Rocester in January. Our good customer, Briggs, was kind enough to donate the value of the lunch to the charity following a successful event.

Pictured above: Yvette Henshall-Bell (Group Managing Director - Global Key Accounts at JCB World Headquarters), Gary Clements (Strategic Development Director at Briggs Equipment UK Limited) and Mark Roberts (Sales Director at Gunn JCB).

PEOPLE NEWS

A sustained period of growth has led to many employment opportunities in all areas of our business. We're delighted to welcome the following new members to the Gunn JCB team:

Employee	Depot	Job Title
Charlie Jacob Goodyear	Longridge	Apprentice
Simon David Tunnicliffe	Stoke	Field Service Engineer
Damon Breen	Hilton	PDI Operative
Stuart David Lyes	Hereford	Field Service Engineer
James David Nairey	Altrincham	Apprentice Engineer
Marsala Guiseppe	Altrincham	Field Service Engineer
Andrew Shepherd	Altrincham	Field Service Engineer
Matthew Bayley	Altrincham	Improver Engineer
Claire Griffiths	Group	Service Administrator
Kimberley Latham	Altrincham	Service Administrator
Heidi Leah	Altrincham	Service Administrator
Lee Knott	Group	Sales Administrator
Klaire Wildman	West Bromwich	Office Administrator
Nicola Van Den Berg	National Service Department	Invoice Administrator
Amy Dyas	West Bromwich	Trainee Parts Person
Andrew Hayes	West Bromwich	Service Engineer

SALES TEAM EXPANDS

"I can see the massive influence that back-up generators will have in the future. With the increase in population and decrease in excess electricity, the demand for back-up power will only grow. The advent of the Inteli-Hybrid range shows that JCB is leading the way in green, fuel-efficient and quiet solutions as part of its comprehensive range."

Jim Rotchell, Waste and Key Accounts Sales

An apprenticeship in the plant sector and full-time work in the parts department of a machinery dealer was excellent grounding for Jim Rotchell, our new Waste and Key Accounts Salesman, in his bid to move into machine sales. Prior to joining us here at Gunn JCB in March 2017, Jim worked in general construction sales for Aquila Construction and also at TDL Equipment where he sold into the waste, scrap and quarrying sectors. At Gunn JCB, Jim gets the opportunity to sell the full range;

"The range of machinery available – especially for the waste and recycling sectors – is hugely impressive and when combined with the excellent service and back-up in place at Gunn JCB I believe we have a really compelling offer for customers."

Jon Moss, Generator Sales

We were pleased to welcome Jon to our growing sales team in March 2017. Prior to his appointment at Gunn JCB, Jon worked as the sole Director for AECI UK Ltd for 12 years in the computer networking and digital sector and before that, he worked in sales for Midlands-based Westfield Sports Cars; a leader in the specialised motor sports sector. He's very excited to work with Gunn JCB and particularly on the generator range which is going from strength to strength;

OUT AND ABOUT WITH GUNN JCB HEREFORD

Blue skies and warm weather greeted our customers when we threw open our Hereford depot's doors back in April. We were delighted to welcome new faces and old and walk them round a full range of JCB machinery including: an impressive lineup of compact excavators, the JCB Hydradig, a 525-60 Hi-Viz Telehandler, 3CX Compact and an all-new JCB Access Platform.

Our visitors were able to walk round all the machines and ask questions to our sales team,

before enjoying a BBQ. Jon Wheeler, JCB Finance's Regional Manager, was also present and spent the day advising customers about the current offers.

Many customers tested their mini excavator operating skills by participating in our 'hook-a-duck' driver challenge. If you would like to be invited to our next open day or would like more information on any machine displayed on the day, please contact our Hereford depot on 01432 269304 or email: enquiries@gunn-jcb.co.uk.

DATES FOR YOUR DIARY

20th & 21st June

8th & 9th July

15th & 16th August

SHREWSBURY DEPOT VISIT

The Parts Department at our Shrewsbury depot organised a visit with a difference for local customers back in December. This was a great opportunity to extend hospitality whilst having the chance to explain a new way of distributing parts in the locality. The core customer in the Shropshire and Mid-Wales territory is typically an owner operator with I or 2 machines. To ensure that this group has regular and convenient access to genuine JCB parts the Gunn JCB parts vans have been stocked with a new inventory of consumables and spares and visit dedicated areas on given days, irrespective of whether they have parts orders for the area

Andy Jones, Parts Supervisor, explains why it is important to offer a focused service;

"We know that customers don't always have time to visit us, so we are taking spares to them. Two of our parts men, Stuart Hilditch and Adrian Turner, are now proactively visiting customers in these areas which is also giving them a chance to get to know our customers better. To make the introductions and explain our thinking, we laid on a visit to JCB which included the full VIP treatment -a tour of the production line and presentation in the theatre, followed by lunch. During the afternoon, staff from JCB delivered presentations about the benefits of choosing genuine parts and were able to field questions from customers. The format worked very well and we've received very positive feedback from both customers and JCB staff."

JCB WASTE & RECYCLING EVENT KEVIN OUARRY

Gunn JCB took customers from the waste and recycling sector to JCB for an industry specific event in May which included a demonstration of the full range of Wastemaster machines including the: JSI60W, JS370, JS20MH Material Handler, 437HT Loading Shovel, 110w Wastemaster Hydradig, 5CX Wastemaster, TLT 35D 4x4 Teletruk and 560-80WM Loadall. A range of industry specific crushers and screeners from leading manufacturers and specialist attachments was also on display to ensure the day was most useful for the attendees

NEW PRODUCTS

As ever with JCB, the pace of new product development continues at a blistering rate. Over the next few pages, we are showcasing the ever increasing range of brilliant new products from JCB.

KNOWLEDGE IS POWER NEW RS RENTAL GENERATOR RANGE

The JCB Power Generation range has just grown again with the introduction of the JCB RS rental generator range which offers British-built quality and an innovative, efficient design that ticks all the boxes for reliable power. With models from 19kVA - 1250 kVA, the new range is durable and reliable and each generator is built with premium engines to ensure the most efficient power supply.

JCB recognises that every application is different so the versatile RS Rental range offers prime, standby, load share or auto start power, making sure the right solution for every application is always available

BUILT TO LAST

- Every JCB rental generator is housed in a robust canopy or containe made from heavy-duty, corrosion resistant steel. This protects your investment throughout a rental application, both onsite and during transit.
- There's a heavy-duty oversized baseframe, complete with robust anchor points so you can secure your generator properly during transport.
- Oversized fork pockets with large rubber buffers protect the baseframe when you're lifting the machine.
- Opt for a heavy-duty chain pull bar to give you even more ways to move your generator on site

MADE TO PERFORM

- Engines and alternators are set up to work in perfect harmony to provide a JCB generator that provides the ultimate efficiency and excellent load acceptance.
- Because we only fit the best engines to our generators, we only use world class componentry alongside, from suppliers like Mecc Alte and Deep Sea Electronics. This enhances efficiency and performance.
- For extra peace of mind, our warranty is there to provide you with the exact cover you require for your generator use.

EASY TO USE

- So that you can get the power up and running quickly and easily on any site, the RS range is intuitive to use. The distribution panels, sockets and busbar are all housed in the same place.
- We've made our generators as compact as possible so that you can transport your power easily and move more units at once.
- Our clear and informative control panel provides all sorts of at-a-glance machine information and clear prompts. To aid onsite management, you can check the display through a window.

SAFE OPERATION

- There's a locked access door to keep the distribution panels. sockets and busbar safe.
- For even greater safety, you'll find an auxiliary socket box and an MCB-protected socket box as standard.
- Fan guards and hot surface guards are fitted to the RS generator range as standard to maintain operator safety at all times.

FUELLING PRODUCTIVITY

- · We've fitted these generators with internal fuel fill points with high level vents to reduce spillage and 24-hour fuel tanks as standard to reduce filling intervals. You can opt for a 48-hour tank for even longer working stints.
- A three-way fuel valve means you can use your generator with external or high capacity fuel tanks.
- Uniquely, RS generators have a fuel tank inspection hatch to make life easier for operators carrying out routine checks.

KEEPING YOU INFORMED

- JCB LiveLink for Power is fitted as standard on all rental generator over 60kVA to provide real-time information like fuel levels and service notifications to keep you in complete control.
- LiveLink lets you monitor and manage your generator remotely via the web, email or phone to provide the ultimate fleet management tool.
- Get guick, easy access to performance reports, fault diagnostics and more to optimise your generator's performance.

FEATURES

- Stage IIIA emissions-compliant engines as standard to meet legislation.
- Heavy-duty corrosion resistant steel canopy protects the whole generator.
- Large lockable doors on each side of an RS generator provide easy and secure access to key service points.
- Large 24-hour fuel tanks as standard or 48-hour tanks to reduce filling intervals.
- Durable bunded base with 110% overfill capacity to reduce site contamination in the event of a leak.

G100RS

Oversized fork pockets with large rubber buffers protect the base frame.

ACCESS THE REVOLUTION

JCB took the market by surprise this year by launching a new range of Access machinery which has been quietly developed over the last 2 years to meet the needs of rental companies and contractors worldwide. Initially, a range of 9 electric scissor models has been introduced with every model certified to EN280 and compliant with the latest ANSI and CSA legislation to ensure the highest quality. Designed using 70 years of engineering and manufacturing experience and supported by leading, round-the-clock support, JCB aims to deliver a complete solution for Access customers.

DESIGNED FOR RELIABILITY, BUILT TO LAST

JCB understands the rental market and realises the importance of maximising uptime over a lifetime with tough, long-lasting components. Proven JCB features have been designed into the electric scissors range, such as the full pivot boss design on scissor pack, weld designs and motor protection plates. Plus - unique to JCB - battery and hydraulic door wearpads which support the doors' weight when closed, preventing them dropping over time.

EASIER TO USE

JCB also recognises the need for easy-to-use equipment to maximise productivity. A unique gate handle instead of a push button makes for easier and safer entry whilst a unique roller design for the extension deck makes it easier to extend or retract. There's an ergonomic controller cradle for both left and right hand use and an automotive style foot pedal for deck extension. Everything is designed in a way that lets the operator get to site and complete the job in hand in the shortest possible time.

EASIER TO SERVICE

JCB electric scissors' 'easy to service' design saves time and money. All models have been manufactured with ease of access not just to serviceable parts but all parts in the unit. Ground level access to batteries and hydraulics, plus the use of high quality JCB parts such as filters and valve blocks, all help to keep servicing time - and therefore costs - to an absolute minimum. LiveLink Lite, our innovative telematics system enables remote monitoring of equipment and alerts the user to any unplanned movements or working outside operational hours.

SAFETY FIRST

It goes without saying that safety is a priority. JCB's expertise in off-highway safety systems has been built-in to their Electric Scissor range and the machines are fitted with a whole host of systems including: control interlocks, pot hole protection, speed limiting at height and a load sensing system. Multiple levels of redundancy are incorporated into the safety systems. In addition to this, steps have been taken to protect key safety componentry from accidental damage and tampering.

SHARP PRICING ON GENUINE JCB WEARPARTS plus FREE fittings

OFF and selected replacement parts

Whilst saving bucket-loads

Offers are available until 30 June 2017

The offers are valid from 01/04/17 to 30/06/17 (or while stocks last) from participating JCE dealers. JCB and/or the JCB dealer reserves the right to withdraw, alter or decline any product from sale or any offer without prior notice. These terms do not affect your statu rights. All prices are based on RRP and are subject to VAT.

NEW 540-180 HI-VIZ LOADALL BIG ON PRODUCTIVITY SMALLER ON FOOTPR

A new 18-metre JCB Loadall model has extended what is already the world's biggest range of telescopic handlers. It boasts greater performance and lifting capability than its 17-metre stablemate - despite being 20% smaller in overall dimensions.

The 540-180 HiViz has been specifically built to meet the needs of rental companies and contractors, offering reduced cost of ownership, faster cycle times and best in class visibility, with improved lift height and increased forward reach. At just 2.35m wide and 6.26m long, it is possible to move two machines on a single curtain sided truck or low loader, reducing transport costs.

Increased capacity

With a lift height of 17.5m, the new machine can lift a load of 2500kgs to full height and has a maximum forward reach of 13.5m. However, at just 11,330kg it is 7% lighter than its 17m counterpart thanks to a strengthened four-stage, chain-driven boom and improved chassis construction. It is powered by JCB's Tier 4 Final Ecomax diesel engine, delivering 55kW (74hp) with no requirement for Diesel Particulate Filter (DPF) or Diesel Exhaust Fluid (DEF) additive, reducing operating costs.

For more information, please contact your local Gunn JCB representative.

Quick specs

- 5% improvement in lift height
- 10% greater forward reach
- 50% lower SAE serviceability rating
- 50% service cost saving over 1,000 hours
- 20% faster cycle times

GUNN JCB

RUTTLE PLANT

Headquartered in Chorley, Ruttle Plant is one division of the wider Ruttle Group that offers a range of services including: contracting, recycling, aggregates and haulage. The plant hire division carries a large inventory of the newest, most technologically advanced machines available and prides itself on procuring the safest machines on the market.

With three depots in the UK in Lichfield, Chesterfield and Chorley HQ, plus two further branches in the USA, the company has recently upgraded its fleet with a range of machines from Gunn JCB. The deal included a mix of machines designed to appeal to the company's broad range of customers: a TM 320 Wastemaster, 4 x telehandlers, 2 x Vibromax rollers, 2 x 13 tonne tracked excavators, 2 x 8 tonne excavators and 9 front tip dumpers. The majority of the machines have been delivered to the Chesterfield depot. Gareth Ruttle from Ruttle Plant buys machines from a range of manufacturers and is impressed with the service from Gunn JCB;

"In the past we've bought many JCB 3CX's but recently we've bought a really mixed fleet of JCB machines. Richard Hadfield from Gunn JCB really looks after us well and our customers ask for JCB so we have bought these to ensure we have the right machines for our customers."

JS EXCAVATOR HEADS FOR THE FALKLANDS

Of the latest JCB excavators to leave the yard here at Gunn JCB, one is destined for the Falkland Islands for our client Interserve Defence. On arrival in the British territory, the huge JS330 excavator (which has been supplied with a crusher bucket and four quarry buckets), will be put to use by the British military.

UR FIKS **ACCESS EQUIPMENT CUSTOMER**

Briggs Equipment has become our first customer for the brand new range of JCB Access equipment with an initial order for 10 units which will drop straight into their short-term rental fleet. Cannock-based Briggs Equipment is a long standing customer of Gunn JCB and is a provider of unique engineering and equipment solutions to customers, including the JCB Teletruk.

The company now has the accolade of becoming the first business to add the JCB scissor lifts, articulated boom lifts and telescopic boom machines to its portfolio in order to fulfil flexible short-term hire contracts.

most cost-effective way of getting the job done." "JCB has a deserved reputation for well-engineered products that are built to cope with the toughest challenges, so we had no hesitation in adding its new electric scissor lifts to our equipment fleet."

Briggs Equipment is our first customer to offer JCB's new access equipment on flexible short-term hire contracts. Pictured (left) are Allan Parsons, National Rental Manager at Briggs Equipment and Mark Roberts, Sales Director at Gunn JCB.

Over the past five years Briggs has seen a marked increase in demand for scissor and boom lifts, largely driven by more stringent legislation to promote safety when working at height.

Briggs Equipment's National Rental Manager, Allan Parsons, says: "From building contractors and heating engineers to commercial window cleaners and security installers, more and more businesses are engaged in day-to-day tasks that involve working at height for short periods. For many of them, hiring in quality equipment in good condition on flexible contracts will be the

SERVICE ENGINEERS KEEP VEOLIA TICKING

Veolia is one of the leading players in the resource management sector in the UK. The company provides a comprehensive range of waste, water and energy management services designed to build the circular economy by creating green products and energy from waste in order to preserve scarce raw materials and minimise landfill waste. Veolia operates a state-of-the-art integrated waste management facility in Southwark, designed to sort and separate recycling and produce a fuel from waste which is used in the production of electricity.

We have recently delivered two new JCB 457 ZX loading shovels with 5.3m³ buckets and two JCB JS200W material handlers with 800 litre selector grabs to work in the facility where they are helping to sort and handle the incoming materials.

With uptime a key priority for the busy site, which is open 7 days a week, the machines are covered with full repair and maintenance contracts from us. Two of our service engineers have been singled out for praise for their total commitment and dedication to Veolia.

Grant Elmes, Logistics Manager in Southwark, commented:

"We have two Gunn JCB engineers that support us on-site with our JCB machines. I cannot commend them highly enough. They keep us up and running without fuss and nothing is too much trouble for them. They have a deep understanding of our working processes and often anticipate our requirements before we do. They instinctively know that we need these machines working round the clock and they wholly take responsibility for this. I cannot fault the service."

Ian Strachan has been working with the customer's fleet of JCB machines since May 2014 whilst Kieron Tiller joined the Gunn JCB team in 2015 to work alongside lan.

Well done to both for the excellent service you offer to customers.

Pictured above: Ian Strachan (left) and Kieron Tiller (right) - both service engineers at Gunn JCB.

Pictured above: Grant Elmes, Logistics Manager at Veolia, in Southwark.

HISTORICAL LINKS CELEBRATED WITH LARGE ORDER

Ridgway Rentals of Oswestry is a familyowned, plant hire company with over half a century of links to JCB. Originally trading as RAJ Mechanisations Ltd, the company was founded by the late Bob Jones in 1961 as a dealer for JCB machines. Bob forged a strong relationship with JCB founder, Joseph Cyril Bamford CBE, who personally delivered one of the first ever JCB 7 crawler excavators to the business in 1964. Led by Bob's son, Tim Jones, the company changed course in 1977 to become a plant hirer and remains one of JCB's longest standing customers. It has evolved into a successful nationwide, family-owned rental business run by the 3rd generation of the Jones family. Tim's sons, Stuart and Rob Jones, both serve on the board as MD and Director respectively.

The latest investment in 26 high specification excavators cements over 53 years of working with JCB. The deal includes: a JCB Hydradig, 10 x JS131 and 2 x JS220 tracked excavators 3 x JS145W, 3 x JS160W and 2 x JS200W wheeled excavators as well as 5 of the new generation 85Z-1 midi excavators, all of which will be supplied by us.

factor in our decision to choose JCB.

Ridgway Rentals' Managing Director, Stuart Jones said:

"We have a long and proud history with JCB and Ridgway Rentals has a strong commitment to supporting British business. The service and support we receive from Gunn JCB is also a key

This latest investment sees us strengthen our excavator fleet with high spec JCB models which are always well built and provide good value. Many of the new excavators do not require ad blue and the JCB LiveLink system is extremely useful – enabling us to accurately monitor our fleet's performance and schedule servicing efficiently. The new JCB models look great and are fitted with a range of options including: LED lights, durable paint work and sun visors and come with a series of attachments including: hammers, shears and tilt rotators - meaning these machines are well-equipped for the full range of industries we serve."

Ridgway Rentals provides plant hire and sales throughout the UK from its headquarters in Shropshire and has an extensive portfolio of equipment that includes: excavators, telehandlers, loaders, dozers, rollers, skid steers and dump trucks.

STAND-BY POWER SUPPLY FOR LEADING MOBILE PHONE BUSINESS

UK-based BFM Staffs Ltd is a renowned, multi-service, electrical company that provides a wide range of facilities management services for clients large and small throughout the UK. For their client, Brightstar, this included the supply and commissioning of stand-by power at the company's large offices in Crewe, Cheshire. As the UK arm of the world's largest specialised wireless distributor, a reliable back-up power solution is critical. Loss of data in the event of a power failure would be hugely detrimental in the fast paced working environment which involves working with the major mobile phone brands.

BFM Staffs prides itself on supplying the best solution for clients. At the Brightstar site, an additional unit was hired in to ensure power could be supplied to all essential services in the event of a failure. However, the latter proved to be an expensive solution. Mick Burgin, Managing Director at BFM Staffs therefore looked for a new generator capable of providing full power to the whole site if necessary. Having undertaken work for JCB Broadcrown, he obtained a quote for one of the company's new range of plug and play generators - the 500kVA G500QX from us. A deal for the unit, which was specified with an Automatic Transfer Switch (ATS), was agreed and it is now situated on the outside of the building adjacent to the plant shed. The optional ATS panel communicates with the generator to start power automatically in the event of the utility source failing.

At the heart of the G500QX is a reputable Scania engine and an intuitive Deep Sea Electronics control panel which works with JCB LiveLink Telematics to enable remote monitoring of the generator from an internetenabled phone or computer at all times. Mick commented:

"We have seen first-hand the standard of workmanship that goes into building the JCB generators and when we did the figures it transpired that the generator would pay for itself in 3 years. The JCB generator has enabled us to improve reliability and ensure a resilient electrical infrastructure for our client. With JCB's LiveLink and the knowledge and experience of the engineers, we have confidence that if a problem does occur it will be sorted quickly and efficiently and, in most cases, before we are even aware there is a problem. We would recommend a JCB generator every time."

NATIONAL SERVICE DEPOT DD YOU KNOV?

For all your needs out of our normal territory, don't forget the Gunn JCB National Service depot. We have 15 fully JCB trained engineers nationwide who have fully equipped service vehicles who can deal with any issue anywhere in the country. Overnight parts deliveries that arrive on-site between 5am and 7am means our National Service team can get your machine up and running faster than ever. Supporting customers by land, sea and air, Gunn JCB engineers have travelled as far afield as the Orkneys, Shetlands and even the Ascension Islands already this year. The team is supported by 2 controllers: Callum Dawson – Northern Controller and Victoria Chisnall – Southern Controller.
