

NEW

BLADED BUCKETS

Our new range is suited to heavy line excavators from 13 – 20T and is additional to our other ranges, meaning we now offer bladed buckets for 1-20T machines.

- To create this range, we listened to our dealers and global customers
- The bladed buckets are perfect for flat bottomed trenching and utility work
- Bucket shell design and sizes are the same as the existing general purpose bucket – see the tables below for more information
- The buckets feature a Hardox equivalent blade and side cutters for maximum wear and extended working life
- A weld-on toeplate for heavy line machines and a bolt-on for compact excavators
- The new toeplate helps to reduce damage to pipework and cabling while digging
- Extensive testing has been carried out to ensure the maximum productivity of the bucket, helping maximise performance on site
